Sveaflyg expands capacity with SAAB 2000

Sveaflyg Scandinavia has since the spring of 2018 flown mostly charter and ACMI flights with SAAB340. The company has also operated the Stockholm Arlanda – Visby Route during the summer of 2018 with domestic air traffic.

Sveaflyg is investing further and will from October, expand the aircraft capacity with the SAAB 2000 with space for 50 passengers.

Sveaflyg has since its inception had inquiries on flights requiring aircraft with capacity corresponding to SAAB2000 such as range, speed and number of chairs. We see great opportunities to also fly several ACMI flights across Europe, where we help other airlines with temporary capacity. Sveaflygs plan is to have three SAAB2000 in traffic within six months.

The SAAB 2000 is a fuel-efficient propeller aeroplanes at a speed equivalent to a jet aircraft. The advantage of SAAB2000 is that this aircraft type is equipped with ABVR to reduce the noise level in the passenger cabin, says Jimmy Nilsson CEO at Sveaflyg Scandinavia.

About Sveaflyg Scandinavia AB

Sveaflyg Scandinavia is a Swedish air operator. Sveaflyg is operating under Lipican Aer D.O. o Permit (AOC and operative license) with Swedish crew. Sveaflyg flies from the month of October with the SAAB 2000 and the business consists of Charter and ACMI assignments.

Sveaflyg has its operational base at Örebro Airport and all maintenance is also carried out there.
